Bacterial Filtration Efficiency (BFE) and Differential Pressure (Delta P) Final Report

Test Article: SMMMS 50 gsm HFO
Purchase Order: 4500378558
Study Number: 1272966-S01
Study Received Date: 02 Mar 2020
Testing Facility: Nelson Laboratories, LLC
6280 S. Redwood Rd.
Salt Lake City, UT 84123 U.S.A.
Test Procedure(s): Standard Test Protocol (STP) Number: STP0004 Rev 18
Deviation(s): None

Summary: The BFE test is performed to determine the filtration efficiency of test articles by comparing the bacterial control counts upstream of the test article to the bacterial counts downstream. A suspension of Staphylococcus aureus was aerosolized using a nebulizer and delivered to the test article at a constant flow rate and fixed air pressure. The challenge delivery was maintained at 1.7 - 3.0 x 10^3 colony forming units (CFU) with a mean particle size (MPS) of 3.0 ± 0.3 μm. The aerosols were drawn through a six-stage, viable particle, Andersen sampler for collection. This test method complies with ASTM F2101-19 and EN 14683:2019, Annex B.

The Delta P test is performed to determine the breathability of test articles by measuring the differential air pressure on either side of the test article using a manometer, at a constant flow rate. The Delta P test complies with EN 14683:2019, Annex C and ASTM F2100-19.

All test method acceptance criteria were met. Testing was performed in compliance with US FDA good manufacturing practice (GMP) regulations 21 CFR Parts 210, 211 and 820.

Test Side: Engraved Side
BFE Test Area: ~40 cm²
BFE Flow Rate: 28.3 Liters per minute (L/min)
Delta P Flow Rate: 8 L/min
Conditioning Parameters: 85 ± 5% relative humidity (RH) and 21 ± 5°C for a minimum of 4 hours
Positive Control Average: 2.9 x 10^5 CFU
Negative Monitor Count: <1 CFU
MPS: 3.0 μm

These results apply to the samples as received and relate only to the test article listed in this report. Reports may not be reproduced except in their entirety. Subject to NL terms and conditions at www.nelsonlabs.com.
### Results:

<table>
<thead>
<tr>
<th>Test Article Number</th>
<th>Percent BFE (%)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>95.9</td>
</tr>
</tbody>
</table>

<table>
<thead>
<tr>
<th>Test Article Number</th>
<th>Delta P (mm H₂O/cm²)</th>
<th>Delta P (Pa/cm²)</th>
</tr>
</thead>
<tbody>
<tr>
<td>1</td>
<td>6.5</td>
<td>64.1</td>
</tr>
</tbody>
</table>

The filtration efficiency percentages were calculated using the following equation:

\[ \% \text{BFE} = \left( \frac{C - T}{C} \right) \times 100 \]

- \( C \) = Positive control average
- \( T \) = Plate count total recovered downstream of the test article

Note: The plate count total is available upon request.
